

GLOBAL AQUIFER CONTEXT AND GEOTOXICITY RESEARCH EVIDENCE

Country-level research intensity and contaminant-specific literature representation • frozen 892-record analytical subset

■ Arsenic (As) ■ Fluoride (F) ■ Uranium (U) ■ Chromium (Cr)

Pie sectors = contaminant-specific publication representations (non-mutually-exclusive); N = country research-record count.

Base map shows countries, NOT verified aquifer-system boundaries. Shading and symbols indicate research intensity, NOT contamination severity.

Data: GSF frozen country evidence table (756 country-counting eligible records). Geography: Natural Earth. Vector-drawn with Python/Matplotlib.
